The FOCUS Data Collector Designed for Optical and GNSS Surveying Systems

The Spectra Geospatial® FOCUS® data collector is an attachable control unit designed to combine Spectra Geospatial optical and GNSS surveying systems. There are four ways to use the FOCUS data collector:

- Clip onto any FOCUS 50 total station so you can work hands-free behind the instrument
- Control a FOCUS 50 Long Range Robotic total station remotely using the robotic holder and long range radio
- Perform a GNSS survey using a receiver, a robotic holder and Bluetooth®
- Integrated survey using both the FOCUS 50 total station and a GNSS receiver simultaneously. Easily switch between the two methods when working in variable environments, or for simplified resections

With its large 5" multi-touch screen, you can easily navigate all of the Spectra Geospatial Origin software functions, including the interactive map view.

With no additional batteries to charge, the FOCUS Data Collector is compact and extremely portable. It's also easy to transfer data using a USB stick, WiFi and Connect cloud, or using the docking station.

FOCUS Data Collector, for every way you work.
